

Bulgarian Antarctic Research: Life Sciences

This compilation on such diverse topics about Chrysomelidae is dedicated to Dr. P.H.A. Jolivet. Some chapters discuss biological diversity of the primary tropical rainforests of Costa Rica, Panama, Brazil and Central and East Africa and other chapters discuss the biodiversity other countries. The papers cover almost all the Leaf Beetle subfamilies in the broad sense with special detailed treatment of 9 of these sub families. Some papers use morphology to consider the classification of certain groups, whereas molecular DNA studies are used for other groups. In some chapters immatures are treated morphologically and in others their natural enemies are discussed. Host plant diversity and choice are considered as well as feeding behavior. Chemical defense is interestingly discussed in several chapters concerning eggs, larvae and adults. Polymorphism of color pattern and flight ability are the subjects for two contributions. In many chapters genetics and ecology as well as pure biology or natural history are prevalent themes.
