

Josie Haydn Girl Psionic

Who knew science could be so much fun? Who knew it could kill you? After their mother, a prominent neuroscientist, disappears on the way to a research conference, Josie and James have difficulties controlling their powers leading to more accidents, and Josie barely passes sixth grade. Their father decides to enroll them at the Thomas Edison Academy for Arts and Science located on the campus of the Edison Research Institute (ERI), one hour north of their home in Seattle. Enrollment at the academy is limited to students who test positive for Psi Factor, the protein responsible for telekinesis. Upon arriving at the academy, Josie discovers that her powers are extraordinary, even among psionics. Not only are her telekinetic abilities already highly developed for a 12 year old, she discovers she is telepathic, a rare combination, even in the world of psionics.

Thus, Josie becomes the target of a mysterious woman with long black hair whose stratagem includes stealing a special device from ERI. This device was created by the scientists at ERI to save lives, but in the wrong hands could be used as a biological weapon to permanently remove psionic powers of her opponents. Can Josie stop the woman? Will she end up dead like her predecessors? And if she survives, can she pass the seventh grade?
