

## Collected papers on astrophysics

The papers included in this book were prepared over a period of more than thirty years, extending from the time the author left Cambridge in 1957, through his period as a Divisional Chief Engineer with the EMI Electronics Group, and continued after his retirement in 1991. The approach throughout is that of a mathematical physicist tempered by a long career as an engineer in the front line of the physical sciences and technology. As such, the papers include original approaches to long standing unsolved problems in selected areas of Astrophysics, Energy sources, Climate and Pollution, which may stimulate others to reconsider historic and more modern approaches to the problems addressed.
