

## Preppers Guide (Proven Disaster Tech Cheap Book 1)

The author has seen what MARTIAL LAW, ECONOMIC COLLAPSE & DISASTER bring, while serving the United States Army in Special Operations. Along with living through the 1971 San Fernando earthquake, and the effects of the Nevado del Ruiz eruption in 1985. He has first hand experience about major disasters unlike other writers on Amazon and bloggers in prepper forums. Whether its DISASTER, TOTAL COLLAPSE, or MARTIAL LAW, does it really matter? No matter which occurs, you need proven, simple, CHEAP ways to survive. Real students of survival, want to survive. Newbies think they can cyber chat with a few chosen friends, and some how gain experience to become prepared. Some go as far to create online communities for people to trade unproven theories and dangerous practices. If you have read stories from these people that you can live off the radar, isolated, have wireless internet, 4G smart phones, and talk with people long distance whenever you need help. You are living in a dangerous fantasy world. Its make believe. Ask those who lived in Argentina during their economic collapse. Or in Japan after their floods and earthquakes. YOU are responsible for your own survival; dont plan by using the advice of others who have never survived any disasters, what would they know. America faces national/world collapse OR our government declaring martial law. We have the media agitating race wars. Obama attacking gun rights. Increased spying on our citizens, why else is our govt is buying 450 million rounds of ammo from Winchester arms. All you need to do is browse the net and read accounts of increasing gang and group attacks almost on a daily basis. Self survival becomes key because survival is NOT a team sport. The methods presented here are already proven in real survival and combat situations. They are CHEAP proven survival methods.

If you want to risk your life on unproven items, (like wireless anything in a total collapse) good luck with govt controlled infrastructure or its collapse. We wont be wasting time on things that just dont work in real survival/disaster situations or that the govt can control. With the real prospect of martial law or total collapse at some level. Real students of survival KNOW that disasters destroy infrastructure or the govt controls them. Should the govt take over infrastructure, you have to go under the radar to survive. And without use of infrastructure, fancy wireless toys are a pure waste of time. Fancy toys are also a great way to be tracked by those controlling the infrastructure. Prepperwebsite.com has published articles that simple, proven communications devices like CBs, are the way to go. CHEAP, reliable, easy to obtain, and simple to use is key. Real survival experts know that exotic toys wont work. So avoid amateur advice to the contrary. In each of my books in the series, they will guide you through the simple essentials. There is no attempt to sell you on any company or products. It is straightforward, and forward looking. And if those things that you need, (that we have become so dependent on) should disappear. It gives you options to survival when they are gone. So theres no eating plain rice with your hands in the middle of the Vietnam jungle like some amateurs think. There is NO one book that covers all areas of survival. THEY DONT EXIST! Not even the SAS Handbook does that. And soccer moms who now write survival books and offer their advice that may work for kids in day care, or during short power outages, dont work for life and death, or long term survival situations. Remember you dont need a Kindle to read this book; you can download the free PC app from Kindle and read this book on your PC w/o a Kindle.
