

# Engineering Textiles: Research Methodologies, Concepts, and Modern Applications

This volume provides the textile science community with a forum for critical, authoritative evaluations of advances in the discipline of textile engineering. Reporting on recent advances with significant applications in textile engineering, the chapters are written by internationally recognized researchers. This book covers a multitude of important concepts and advances in the field, including: Applications of nonwovens in textile engineering Textile waste treatment for use in emulsion rubbers Parameters of polyhydroxybutyrate nanofibers Preparation of amines for use in textile engineering Progress in photovoltaic textile New applications in nanoengineering materials in the textile industry
