

Hybridity in Translated Chinese: A Corpus Analytical Framework (New Frontiers in Translation Studies)

This book investigates the characteristics of hybridity in Chinese texts that have been translated from English. It also explores the potential impact of translation and hybridity on written Chinese over the past 70 years. It suggests that English-Chinese translations have introduced more and more hybrid structures into Chinese. This book can help us with understanding language change and development, and it can also shed new light on the translation process and help identify translation norms.
