

Indus Script Cipher

Indus Script Cipher ISBN 978-0-9828971-0-2 This is a path-breaking work as significant as the decipherment of Egyptian hieroglyphs by Champollion. For nearly 130 years, the Indus script has remained a challenging enigma to scholars of languages, writing systems and civilization studies. The script was invented and used over an extensive area of what is called the Indus or Sindhu-Sarasvati civilization. Over 2000 or 80% of archaeological sites are found on the Sarasvati River basin, a river adored in a very old human document called the Rigveda and which dried up due to tectonic and resulting river migration causes. In 1822, history was made when Egyptian hieroglyphs were deciphered by Jean-François Champollion from parts of the Rosetta Stone. Champollion showed that the Egyptian writing system, c.3000 BCE was a combination of phonetic and ideographic glyphs. The Rosetta Stone is dated 196 BCE and had a decree in three versions: one in ancient Egyptian hieroglyphs, one in the Egyptian demotic script, and one in ancient Greek. Since alphabets of ancient Greek were known, Champollion used the trilingual inscription to validate his historic decipherment. Indus Script Cipher makes history recording hundreds of hieroglyphs of India. Absence of a Rosetta Stone which has been the principal impediment in validating any decryption of Indus script cipher is thus overcome. Further validation comes from evidences of the historical periods in India from c. 600 BCE showing continued use of Indus script hieroglyphs which evolved from c. 3300 BCE. This book details a decipherment of the Indus script using the same rebus method used by Champollion to read ancient phonetic hieroglyphs of India. By demonstrating an Indian linguistic area of cultural and language contacts and history of language changes, this is a landmark contribution to

civilization studies of the world and will promote efforts to rewrite the ancient socio-cultural and economic history of a billion people in India and neighboring regions. This work will also be of interest to IT and Information Theory specialists. Comment by a world-renowned expert in Cryptography: What a delight truly it is to read the prodigious effort of Indus Script Cipher! In the case of Egyptian hieroglyphs, there was a Rosetta Stone, which enabled a (partially) Known Plaintext attack to succeed. The task is considerably harder here in a Cyphertext-only attack without a Rosetta Stone. The concept of Unicity Distance (the information-theoretic innovation of Claude Shannon) is the minimum length of ciphertext required to break a code theoretically, never mind its actual complexity. The code-breaking is not just deciphering a code, but it is finding the secret-key, which simplifies the old and new tasks as well. Kalyanaraman studied thousands of seals containing a number of glyphs and each glyph having two or more glyptic elements, sufficiently large enough ciphertext symbols or characters. Compiling a database of over 8000 semantic clusters of glosses from Indian multi-lingual lexicon and cryptanalysis of these is indeed history-making, par excellence. i? TR. Narasimha Rao, Ph.D. Loflin Chair Professor-Emeritus of Computer Science, Former Director of Crypto Lab, University of Louisiana, Lafayette, LA
