

Supply Chain Management Practices by the United States Marine Corps in Operation Iraqi Freedom

The concepts discussed in this book resemble the supply chain needs of today's companies who believe technology will solve their supply chain problems. Even with the best systems, PEOPLE still need to make decisions and take action, especially when systems fail. Inside you will find that ... -Communication between the Marines on the front-line and supply depots was broken -The distribution system did not work -Logistics units could not distribute on the move -Warehouse tents had no idea what they had -Supply units did not know who ordered what -The system was broken. However, even with all these failures, success of the campaign is part of history. The true heroes were the Supply Leaders on the ground who made it happen. In spite of the odds against them, these Marines found what the warfighter needed to accomplish the mission. Find out what was broken and how the Marines made it happen inside the book. How often do we have to make things happen when operations fail to plan for the supply chain? Considering today's supply chain practices that rely heavily on technology, the concepts discussed in this book show that the greatest weapon on the battle field remains and always will be a United States Marine. For those of us in business, you can see what your greatest asset is the people who manage your supply chain to make sure the right stuff is in the right place at the right time to serve your clients and customers. Without the supply chain, sales has nothing to sell and marketing has nothing to market. Failure is never an option, so Supply Leaders constantly envision needs and take action before action is required. You can see this concept in action by reading Supply Chain Management Practices by the United States Marine Corps in Operation Iraqi Freedom
