

Jump the Curve: 50 Essential Strategies to Help Your Company Stay Ahead of Emerging Technologies

Jump the Curve will show how exponential trends in eight areas - computers, data storage, bandwidth, software development, gene sequencing, robotics, nanotechnology, and the advance of knowledge itself - are transforming the global economy and altering our future. The book then proceeds in a easy-to-understand (non-technical) style to describe the eight essential elements that business executives and their organisations can - and must - incorporate into their planning in order to deal with today's explosive and emerging economy including: leveraging today's technology to meet tomorrow's needs; developing counter-intuitive thought skills; tapping into the power of diversity; and, Learning to unlearn. While scores of books from *The World is Flat* to *The Tipping Point* have done excellent jobs of explaining the effect of accelerating technologies, *Jump the Curve* defines the nature of technological change itself and shows readers how they, and their organisations can benefit from the knowledge.
