

# Electronic Structure and Bonding of Actinide Complexes (Classic Reprint)

Excerpt from Electronic Structure and Bonding of Actinide Complexes This report outlines some of the preliminary progress made in the study of the electronic structure of actinide complexes in the Hartree - Fock self - consistent - field approximation. Our goal is to interpret the optical and magnetic properties of these compounds and to estimate the degree to which covalency must be taken into account in order to understand the role of the 5f electrons in both molecular and metallic bonding. The specific compounds to be investigated will include both the hexafluoride and oxide complexes as well as small metallic clusters which reflect the complex geometry of the unit cell found in the metallic phase of these elements. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
