

Quantum Theory, A System of Physical Chemistry, Volume III

209 pages, illustrated, Planck's concept, atomic heat, equilibrium of gases, distribution of electrons in atoms. Max Planck (1858-1947) proposed the concept that radiation emissions came in indivisible units or quanta, in 1900. Planck's quantum theory formed the basis of Albert Einstein's work on the theory of light in 1905, leading to the theory of relativity.
