

Quantum Perception: Mind-Power Beyond the Senses

In this thought-provoking book, Zak Martin explores those areas of the mind for which scientists can offer no satisfactory explanation - including prophetic dreams and visions, clairvoyance, and telepathy - and he makes a powerful intellectual argument for their reality. In clear, non-technical language, he examines the implications of recent scientific discoveries - particularly in the field of quantum physics - to our understanding of the mind, consciousness and psychic phenomena, and he arrives at some astonishing conclusions. Whether you believe in the paranormal or not, this book will fascinate and astound you. Sasha Fenton (TV personality and best-selling author)
