

The Silent Revolution in Cancer and AIDS Medicine

Examining all the major research data since the 1940s, this book challenges two orthodox medical models: HIV as the cause of AIDS, and random genetic mutations as the cause of cancer. Based on the recent findings from Evolutionary Biology and Nitric Oxide research, it presents a fundamentally new understanding of the human cell, its double genome split between the cell nucleus and the mitochondria, and the role of energy production and signal modulation for immune reactions and carcinogenesis. Finally, it explains the concept of a new Cell Symbiosis Therapy for the treatment of all chronic diseases, including cancer. Now available in English for the first time, this book is a must-read for doctors, patients and anyone following the cutting edge of biology and immunology. With the blasting open of such doors of knowledge, the medical world will never again be the same. Chapter I A Disastrous Decision. 20 years of abusing nitric gases for sexual enhancement-the seemingly mysterious consequences Chapter II The Sensational Discovery Gaseous Nitrogen Monoxide as bioenergetic regulator within and between living cells-the gas war between humans and microbes Chapter III The AIDS Mystery Why the AIDS diseases were misinterpreted-inhibition of the gaseous defense is the cause of acquired immune cell weakness Chapter IV AIDS is not a Contagious Disease Opportunistic infections and Kaposi sarcoma were well known long before the AIDS era a variety of causes trigger the same immune response, as programmed by biological evolution. Chapter V Challenging the Previously Valid Immunity Theories How acquired immune cell impairment actually develops Chapter VI The Most Successful
