

The State of Food Insecurity in the World 2004: Monitoring progress towards the World Food Summit and Millennium Development Goals

The sixth edition of The State of Food Insecurity in the World reports that the number of chronically hungry people in the developing world has fallen by only 9 million since the World Food Summit baseline period of 1990-1992. The conclusion is inescapable: we must do better. Looking at the impressive progress that more than 30 countries in all developing regions have made in reducing hunger, the report highlights another clear and compelling lesson -- we can do better. And for the first time, The State of Food Insecurity in the World 2004 presents provisional estimates of the staggering costs that hunger inflicts on households and nations -- the millions of lives ravaged by premature death and disability, the billions of dollars in lost productivity and earnings. On both moral and pragmatic grounds, these estimates lead to one more unavoidable conclusion -- we cannot afford not to do better.
