

Electronic Circuits to Fusion, Magnetic Confinement, Volume 6, Encyclopedia of Applied Physics

EAPs Seal of Approval EAP is sponsored by the * American Institute of Physics * German Physical Society * Japan Society of Applied Physics * Physical Society of Japan First work of its kind to approach physics from the standpoint of technical and industrial applications - Comprehensive and detailed coverage of the entire field of applied physics in an easily accessible form - Unique and highly useful classification system - Supplements guarantee that all articles remain up-to-date. Each article contains: - a detailed table of contents - a glossary of unfamiliar terms - a detailed reference list - a guide to further reading - Numerous cross-references - Uniform terms, abbreviations, symbols, and units

Landmark Experiments in From Wikipedia, the free encyclopedia. Jump to: navigation, search. This article is about the fusion reaction device. For other uses, see Tokamak (disambiguation). A tokamak (Russian: ?) is a device that uses a powerful magnetic field to confine plasma. Magnetic fields are used for confinement since no solid material could contain the plasma. **G. L.
