

The Science Of Life: Philosophical Equations Of Physics, Chemistry, Biology and Religion

The Golden Age Of Science has arrived with leading thoughts from this book full of philosophical and mathematical thoughts. This Book Of Science is a unique volume of poetry full of scientific equations to understand fundamental scientific values of today such as quantum entanglement, gravity, relativity, string theory, genetics and even the origin of life. From Newton to Einstein to Bohr to Schrodinger, this book covers a history of physics, to uncover, inspire and unravel new laws of science to allow the past generation to be understood by the new and future generations to come. The information age has allowed a Golden Age of Science to begin and this book is a fundamental research log for the start of the new era of quantum mechanics, nanotechnology and space exploration. It attempts to align everything in science towards an orderly, easy and efficient method of deduction for a grand unified theory and a practical logic to make science a success for society to reach its goals and ambitions for wealth, profit and worth. It attempts to unite the laws of life in the simplest way possible; through the heart and mind of a philosopher.
