

Process Optimization in Home Healthcare

At last! A step-by-step guide to improving Home Healthcare! Contains easy to understand models, templates, tips and techniques, developed and practiced by some of Americas finest hospitals, universities, and home healthcare providers. Get a jump start on the road to planning, managing, and providing excellent home healthcare with this unique book. Everything you need is right here. This is the first book to map the home healthcare delivery business practices from start to finish. Inside, youll find a home healthcare reference model, a process optimization primer, documentation on all processes associated with home healthcare delivery and instructions on how to locate the tools to modify these models to reflect your own organization. No healthcare organization involved in home healthcare can afford not to make use of this process model as a reference point for best practices. Start with Process Optimization in Home Healthcare and its supporting analysis tools, modify the model to reflect your organization, then discover the answers to nagging question such as:

- * How do we improve cost effectiveness without impairing quality care?
- * How much does it really cost us to provide care?
- * How do we define and measure outcomes?
- * How can we stay ahead of the regulatory curve?

THIS BOOK FEATURES:

- * The Process Optimization in Home Healthcare Model attributed with cost, time and sequence data
- * Data Model and Process Flow Model with integrated glossary
- * Solutions for operational effectiveness
- * Templates for incorporation best practices
- * Tips for leading change efforts in your healthcare organization
- * WisdomWorks! and DataWorks! Viewers

LEARN HOW TO:

- * Develop process improvement goals in half the time
- Test and evaluate improvement plans before you implement them
- * Guide your team

through a successful process improvement project from start to finish * Easily identify outcome metrics and enterprise requirements * Convert process models to application code * Maximize operational effectiveness * Read, use, and develop activity models
