

Everything is Physics: Book 2: The Quantum Continuum Dark Matter and Dark Energy

This book begins with a fascinating account of the history of our knowledge of the Universe, starting with the ancient Egyptian and Greek views, bringing us up to date to what is currently known about the Universe. It also describes the most recent discoveries that have been made about the Universe. One of the most intriguing of these discoveries is that the Universe as a whole is expanding at an increasing rate. This acceleration in the expansion of the Universe indicates something that was almost totally unexpected by scientists. That is, that there is energy inherent in the vacuum of empty space. In order to explain the possible nature of this energy, the book continues by explaining two of the most important theories relating to space and time. These are known as the Einsteins special and general theories of relativity. The various possibilities for the presence of energy in empty space is also explored, concentrating on the theory known as quintessence. The writing style is intended to drive the reader to investigate these theories in such a way that even the unfamiliar audience can readily comprehend the subject matter. In the later Chapters a revealing and direct approach to the understanding of the special and in particular the general theory of relativity is presented, which explains these two theories in line with contemporary modern string and quintessence theory. For those who are interested in greater detail, there are highly instructive appendices that include explanatory and technical notes. Overall this book amplifies our knowledge of the nature of the Universe as a whole, and explores the possible candidates for the inherent energy in empty space including quintessence. The book also explores the possibility of an as yet unlocked shift in our understanding of quintessence, such that the presence of the energy inherent in empty space may one day open a new

window on the true Nature of the Universe. The subject matter is presented in a comprehensible, clear, concise and compelling way.
